HeliLadder announces new L-Series product line for Robinson and more

HeliLadder of Blue Moon Designs has officially released its newest product line: The HeliLadder L-Series. A departure from their well-known MX5+ modular ladder system, this fixed-length, lightweight, cantilevered 8' ladder is designed specifically for rotorhead access on Robinson aircraft, as well as those with external tanks and restrictive landing gear attachments. Test fits with numerous aircraft show strong promise as a new, breakthrough ladder solution, and adds yet another option for HeliLadder's OSHA approved and ANSI certified products to address the industry's challenge of keeping technicians safe while working at dangerous heights.

HeliLadder is thrilled by the response it received at this year's Verticon and is now preparing for its first production run of L-Series units to outfit its ever-expanding customer base. A multitude of program types sees the potential with the new product line, including EMS, service centers, law enforcement, private operators, training schools, aircraft manufacturers, and more.

The HeliLadder L8 is now available for pre-order. For more information, visit www.heliladder.com. Never compromising, always evolving.
