

Spectrolab displays next-generation airborne searchlight at VERTICON 2025

DALLAS, Texas, March 11, 2025—Spectrolab, Inc. is displaying its newest Nightsun® airborne searchlight at VERTICON 2025 in Dallas this week.

The Nightsun® SXP-10 features a new innovative searchlight design which builds on more than 50 years of high intensity searchlight design and manufacturing heritage.

The Nightsun® SXP-10 was developed to fill the gap in the mid-size high intensity searchlight segment. SXP-10 provides users intense dual mode (visible/infrared) light output with the ability to interface with other on-board mission systems, electrical-optical and thermal imaging camera systems and displays. The Macro-Blue™ digital control system will also provide customers with greater flexibility and ease of operation when and where they need it most.

For more than 50 years, Spectrolab, a Boeing subsidiary, has been designing and manufacturing high-intensity searchlights for military and commercial customers around the world with its Nightsun® series of high-powered searchlights for use on helicopters and fixed-wing aircraft. For more information on Spectrolab visit www.spectrolab.com.

Please visit Spectrolab booth #10830 at VERTICON or contact us at customerservice@spectrolab.com for more information about the Nightsun® SXP-10 and the entire family of Spectrolab searchlights for the vertical lift industry.
