Smith Myers Expands Global Reach with Major Contract Wins and more Life-Saving Success, Announced at Paris Airshow

Smith Myers is exhibiting with the UK Pavillion (stand F169 in Hall 2B) organised by the ADS Group

Paris, France – 18 June 2025 -- UK-based multi-award-winning Smith Myers is leveraging the Paris Airshow as a launchpad for further international growth, announcing major contract wins across North America, Europe and Asia. The company also celebrated a critical achievement—two lives were saved in a Northern European nation within the first week of its ARTEMIS system going live.

Recognising the need for strategic global presence, Smith Myers has established “on-the-ground partnerships” in the United States, Europe, and Asia, ensuring direct support for clients in key regions. These alliances will streamline deployment, enhance customer responsiveness, and accelerate innovation tailored to regional operational demands. Further partnership details will be announced soon.

Smith Myers’ Managing Director Andrew Munro highlighted the company’s growing international footprint, confirming established on-the-ground partnerships in the United States, Europe and Asia, with further developments of the ARTEMIS Mobile Phone Detection & Location System (MPDLS) to be unveiled soon. These alliances, according to Munro, will not only streamline deployment, but it will also ensure that our customers have access to regional advice, training and support in their regions.” “as the factory put MPDLS of choice for several large aircraft manufacturers, our order book continues to grow across multiple multi-year programs. This is outside the retrofit business, which continues to grow with two new major European orders signed this week”

The significance of this expansion was underscored during a visit to the Smith Myers stand at the Paris Airshow by UK Parliament's Defence Select Committee, led by Chair Tanmanjeet Singh Dhesi MP. Their engagement highlights the strategic importance of Smith Myers' advancements in defense, law enforcement, and emergency response applications.

"It is an honour to host the UK Parliament's defence oversight body, especially at a time of significant expansion for Smith Myers," added Munro. "With ARTEMIS MPLDS transforming SAR and ISR operations across sectors, our growing international presence ensures we can deliver cutting-edge solutions with local expertise. Strong partnerships enable rapid implementation, close collaboration, and continuous innovation—key drivers in advancing safety and operational efficiency worldwide."

Director and co-founder Peter Myers said: "By combining our UK-based expertise with strategic international partnerships, Smith Myers is poised to lead the next wave of advancements in search and rescue, defense applications, and emergency response technologies."

About Smith Myers

Smith Myers specializes in advanced technologies that enable mission-critical operations. With a focus on innovation, the company delivers world-class solutions across SAR, defense, and commercial markets.

Smith Myers ARTEMIS suite of SAR products have been saving lives around the world. Most recently selected by the UK Maritime Coast Guard Agency under the UK's new SAR2G program, the growing global customer base includes programmes in Europe, North America, South America, the Middle East and Asia.
