### **AEM launches new advanced MTP138 VHF FM panel-mount radio**

Kelowna, BC, Canada, February 17, 2026 – Canadian avionics manufacturer, Anodyne Electronics Manufacturing Corp. (AEM), introduces the industry's newest and most advanced narrowband/wideband panel-mount VHF FM radio for special-mission platforms. The MTP138 is a modern and reliable solution for analog communication on all channels across the 138MHz to 174MHz frequency band.

"We're pleased to bring this modern tactical transceiver to market," says Tony Weller, AEM's Sales and Marketing Director. "Adding another user-friendly and easy-to-install product to our growing family of radios is a major step for reliable special mission radio technology and in supporting our global customers."

The MTP138 was developed in consultation with offshore, air medical, search and rescue, coast guard and forest service operators, and boasts a robust design to ensure high performance in lengthy and demanding offshore oil & gas, windfarm and specialized mission environments.

The brand-new radio features a large 3.5-inch NVIS-compatible screen displaying all channel and zone information, it's simple to use, and puts all control and easy programming at the user's fingertips.

The MTP138 custom installation and conversion kits make mission system upgrades and replacements easy. The radio can also be converted to a Project 25 digital transceiver as required.

AEM is actively evaluating regional STCs for the most popular aircraft models to assist with operator integration. Stay tuned as these projects come to market.

### **Features**

- Simple user interface with menu control and intuitive programming
- Supports industry-leading 40 zones and 5000 channels
- Front-panel USB-C DATA port for loading custom channel and zone profiles
- Field adjustable receive sensitivity for complex RF signal environments
- New thermal management technology to withstand lengthy missions without failure
