

Florida State Guard Has Selected Lifeseeker for Emergency Response Missions in the United States

Atlanta, March 2026 – The Florida State Guard has selected Lifeseeker systems from CENTUM to support airborne emergency response missions.

This will be presented at Verticon and includes five Lifeseeker SAR XL S10 systems being integrated across several rotary- and fixed-wing platforms operated by the Florida State Guard. These platforms include the UH-60 Black Hawk and Cessna 206, among other aircraft. Integration work is currently underway on selected platforms.

The systems will be used in a range of public safety missions, primarily search and rescue and disaster response.

In addition, the Florida State Guard has incorporated several Lifeseeker Mini S10 units into the E455 UAS platform from Event 38, an American drone manufacturer. This provides complementary capabilities for specific mission profiles. These deployments highlight the versatility of the Lifeseeker product family across multiple platforms.

Beyond this contract, Lifeseeker systems have been selected by several other organizations across multiple U.S. states, from Florida to Alaska, covering a wide range of operational environments.

All Lifeseeker systems deployed in the United States are FCC certified, a requirement not commonly met by systems of this type

CENTUM will be exhibiting at Verticon 2026, held from March 10 to 12 in Atlanta, Georgia, and will present its solutions at booth B2706

About CENTUM

CENTUM is a product-driven company that specialises in airborne technology based on mobile phone systems, making both as individuals and our society safer.

CENTUM products enable search and rescue teams to find missing people quickly, and they provide the security and defence sectors with the tools to gather intelligence rapidly and efficiently. They also enable first responders to create a dedicated and secure mobile phone networks, and to protect the integrity of existing networks.

We are the leading experts in airborne cellular systems, with a team of advanced engineers We focus on delivering an outstanding user experience, including ensuring our products are easy to install and use.

We work closely with OEMs to ensure our products are widely available as a linefit option, as well as working with end-users both directly and through our expert partners, to fit our hardware onto their existing fleets. As a result, our products are available for all types of aircraft, both manned and unmanned.
