## COPTERSAFETY EXPANDING HELSINKI TRAINING CENTER

Coptersafety will be expanding their purpose-built training center in Helsinki, Finland for needed additional capacity.

Earlier this year, Coptersafety announced its new majority owner, MML Keystone, “This partnership will allow us to expand capacity, invest in additional simulators along with new locations and continue delivering the highest quality training to our customers worldwide,” as Hannu Marjoniemi, CEO and Co-Founder of Coptersafety, stated originally.

Hannu Marjoniemi shared “The expansion of our current facility and headquarters here in Helsinki and added training capacity with new Level D full flight simulators is a natural next step for us and is part of our larger future expansion plan.”

The expansion of Coptersafety’s Helsinki training center will accommodate the three new Level D Full Flight Simulators ordered last year. Including a third AW139 full flight simulator from TRU Simulation, and, from REISER Simulation and Training, an additional H145 (D3) simulator, and a completely new type with the H175 full flight simulator.

Construction of the extension to Coptersafety’s training center will take place this year, to be ready for the new simulators that are expected to be available in 2027 and 2028, subject to regulatory approvals and schedules.
