Dallas Avionics Signs Exclusive Service Agreement With Axnes

(3/10/26, Dallas, TEXAS) Dallas Avionics announced today at VAI's annual VERTICON conference held this week in Atlanta a formal exclusive agreement with AXNES to service all their North American line of MP transceivers including the popular MP-30 and MP-50.

"We are pleased to announce this formal agreement with AXNES," said Dallas Avionics Government Agency Sales Executive Cody Klaehn, a Retired Texas DPS Aircraft Tactical Flight Officer Training Lieutenant. "I have used this equipment for years in law enforcement. Their rugged full metal housing offers reliable service in demanding environments. We realize that this equipment is vital to field operations and getting them back in operations when they do need service is important"

Dallas Avionics was chosen because of their years of communications experience, extensive sales network and proven track record of customer service. Dallas Avionics sister company Radio Masters, Inc. will perform all the require service. The MP-30 and MP-50 integrate with the aircraft wireless system base station to perform seamless communication when away from the aircraft. It can also provide stand-alone wireless crew communication when no wired system is present. This also allows wireless communication as if it is still tethered to the aircraft.

"We will be able to perform battery replacements, and refurbishments," said Manager of Radio Masters Aaron Swansson. "If we can help the end users get their product back quicker that is important to us. We know how critical it is for our customers to have their products returned on time and fully functional ready for the next mission."

At Radio Masters Swansson is responsible for inspecting equipment and making sure they are all in optimal condition before going back out to customers. The team repairs radios at their location in Dallas.
