

RMCI, Inc. and Onboard Systems Hoist & Winch Announce Strategic Partnership for Ground Station and Cloud Software for Pegasus Next-Generation Rescue Hoist

March 11, 2026

HUNTSVILLE, AL — RMCI, Inc. today announced a strategic partnership with Onboard Systems Hoist & Winch to provide ground station and cloud software for Onboard Systems' Pegasus™ next-generation rescue hoist.

RMCI is the industry leader in helicopter health monitoring and has extensive experience in developing world-class ground station software, cloud data management, and advanced data analysis tools for its own avionics products. RMCI will leverage this expertise to provide a comprehensive user interface software solution for the Pegasus system's Data Acquisition Sensing and Health (DASH) functionality.

RMCI will provide both a robust ground station and a globally accessible cloud application. The ground station software will interface with the hoist and allow users to view data for immediate decision making, even in remote locations without reliable Internet access. The cloud software will enable fleet managers to see up-to-date data from all their helicopters and hoists around the world.

The DASH software will provide Pegasus users with an unparalleled level of insight into the usage and performance of their hoists, and it will eliminate the need for keeping records on burdensome paper log cards. Current remaining life information for each component will allow for timely part ordering and scheduling of maintenance.

“RMCI is excited to partner with Onboard on the Pegasus program,” said Ken Speaks, CEO of RMCI, Inc. “Pegasus is poised to become the industry-leading solution for helicopter hoists, and we are eager to provide their customers with the same level of excellence in software and support that our XRDS customers experience every day.”

Pegasus will be certified to EASA's recently released ETSO-2C208 for electrical rotorcraft hoists, providing operators unparalleled performance, reliability, and maintainability.

About RMCI, Inc.

RMCI provides advanced aviation technology solutions including aircraft health monitoring systems, mission systems integration, and aircraft data management capabilities for government and commercial aviation operators.

About Onboard Systems Hoist & Winch

Onboard Systems Hoist & Winch is a global leader in Search & Rescue (SAR) and Human External Cargo (HEC) missions. Our field-proven hoists are built to withstand harsh weather and extreme environments to help keep you safe until the job is done. Backed by more than 50 years of proven reliability, our equipment is unmatched in safety and durability, holding the most EASA and FAA rescue hoist certifications in the industry. Based in Anaheim, California, Onboard Systems Hoist & Winch operates as part of Signia Aerospace.
